

Atlas User Declaration

version: 2018v1

GDPR

The European Union's General Data Protection Regulation (GDPR) requires us to inform each user what personal data we are storing within the Atlas facility and how we are processing it.

- For initial account provisioning, providing on-going services and satisfying storage and archival requirements your user name, real name, email address and public grid/ssh credentials are stored in our internal configuration management system.
- Any access to Atlas' services (for example logging into the system, or accessing a web server) results in personal data being recorded automatically in the system log files. The IP address, timestamp, user name and/or real name, browser version, operating system, and previously visited web pages (if disclosed by the browser) may be recorded.
- Using Atlas, for example submitting Condor jobs or sending email, will result in personal data being logged. These are typically the user name and/or email addresses and/or real name. Parts of the data related to Condor jobs is processed and passed on to the LIGO Data Grid Accounting System at MIT.

Use of Atlas' resources

I agree that Atlas' computing time and resources will only be used for work where at least one of the co-authors or collaborators is a current member of the AEI Hannover Data Analysis Group (for example, work on LIGO-Virgo Collaboration full-author-list publications). If this is NOT the case then I will contact Bruce Allen (bruce.allen@aei.mpg.de) or the Atlas team (atlas_admin@aei.mpg.de) in advance with a request to use Atlas resources. I understand that compliance with GDPR and other regulations is only possible if I do not store any private material or documents on Atlas.

I also agree that I will not deliberately use the system in ways that are harmful to others users.

My signature below indicates that I understand this document and will comply with the requirements listed above.

Full Name	Place, Date	Signature
-----------	-------------	-----------

Note that only users who have signed and returned this document will be able to log into Atlas.
